5.4. EUT Configuration on Test

The following equipments are installed on conducted emission test to meet CISPR 32 requirement and operating in a manner, which tends to maximize its emission characteristics in a normal application.

5.5. Operating Condition of EUT

- 5.5.1. Setup the EUT and simulators as shown in Section 5.1
- 5.5.2. Turn on the power of all equipments.
- 5.5.3. Let the EUT work in test modes (EUT Working) and test it

5.6. Test Procedure

The EUT is put on the table which is 0.8 meter high above the ground. The vertical conducting wall of shielding is located 40cm to the rear of the EUT. The power line of the EUT is connected to the AC mains through a Artificial Mains Network (A.M.N). A EMI test receiver (R&S Test Receiver ESCS30) is used to test the emissions from both sides of AC line. The bandwidth of EMI test receiver is set at 9kHz.

The bandwidth of the test receiver (R&S Test Receiver ESHS30) is set at 10KHz. waveform are attached within **Appendix I**

AS/NZS CISPR 2015+A1: 2020
Magnetic Field Emission Limit

All emanations from Non-ISM devices or system, including any network of conductors and apparatus connected thereto, shall not exceed the level of field strengths specified below:

Frequency band MHz	Quasi-peak Electric Field Test Distance 3m dB(u V/m)
30-230	40
230-1000	47

- (1) The limit shall decreasing linearly with logarithm of frequency
- (2) Distance refers to the distance in meters between the test Instrument antenna and the closed point of any part of the E.U.T

6.3. EUT Configuration on Test

The following equipment are installed on Radiated Emission Measurement to meet the Commission requirement and operating regulations in a manner which tends to maximize Its emission characteristics in normal application

6.4. Operating Condition of EUT

- 6.4.1. Setup the EUT as shown in Section 6.1.3
- 6.4.2. Turn on the power of all equipments.
- 6.4.3. Let the EUT work in test mode (ON) and test it.

6.5. Test Procedure

The EUT is placed on a turn table which is 0.8 meter above ground. The turn table can rotate 360 degrees to determine the position of the maximum emission level. The EUT is set 3 meters away from the receiving antenna which is mounted on a antenna tower. The antenna can move up and down between 1 to 4 meters to find out the maximum emission level. Broadband antenna (calibrated by dipole antenna) are used as a receiving antenna. Both horizontal and vertical polarization of the antenna are set on measurement. The bandwidth setting on the test receiver(R&S Test Receiver ESCS20) is 120KHz. The EUT is tested in Anechoic Chamber. The frequency range from 14MHz to 1000MHz is checked. All the test results are listed in Section 6.6.and all the scanning waveform are attached within **Appendix I**
